

## Client Profile

### Derriford Hospital Trust Hospital, Plymouth

Derriford Hospital is a large acute general hospital serving Plymouth and nearby areas in Devon and Cornwall. It also provides tertiary Cardiothoracic Surgery, Neurosurgery and Renal Transplant surgery for the whole of the South West Peninsula.

*Derriford Hospital*

*Mike Webber,  
Head of Medical Engineering, Derriford Hospital*

*“infoHealth have migrated 100% of our legacy SEMS system data into F2 and fully customised features for us ”*

Derriford Hospital in Plymouth was the first trust to implement f2 in 2006. Mike Webber, Head of Medical Engineering at Derriford played a crucial role in the development of the product. The following business benefits influenced Mike's decision to choose f2:

- A pure web based application fulfilled the strategy of the trust to distribute information within the organisation without having to install software and maintain individual PC's.*
- The pricing model was attractive because it had no hidden costs - meaning no additional license payments were required for new software modules. At the time of purchase, the Staff Training and Equipment Library modules had not been developed, on their release the trust were given free upgrades as part of their original capital license agreement.*
- f2 differs fundamentally from its competitors by taking a user / role centric approach to data which benefits the users directly, providing an easy system to navigate with instant access to the information they need. This in turn provides a better ROI for the organisation; an accessible information network increases the effectiveness of operational workflow by reducing time, effort and pain points to run a medical engineering environment.*
